#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 101

- 1. 35 U.S.C. 101 reads as follows:
  - Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.
- 2. Claims 9-16 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 9-16 recite a "computer readable medium", in accordance to the Applicant's specification, may be an electromagnetic signal (carrier wave and infra red means, page 10, lines 12-12-15). This subject matter is not limited to that which falls within a statutory category of invention because it is not limited to a process, machine, manufacture, or a composition of matter. Instead, it includes a form of energy. Energy does not fall within a statutory category since it is clearly not a series of steps or acts to constitute a process, not a mechanical device or combination of mechanical devices to constitute a machine, not a tangible physical article or object which is some form of matter to be a product and constitute a manufacture, and not a composition of two or more substances to constitute a composition of matter.

#### Allowable Subject Matter

3. The following is a statement of reasons for the indication of allowable subject matter: The present invention describes the method and apparatus for filtering common mode interference. The closest prior arts, Johnson (US 5,920,223) discloses a method

Application/Control Number: 10/627,961 Page 3

Art Unit: 2611

and apparatus to improve immunity to common-mode noise. However, Johnson fails to disclose summing the levels of a subset of data channels to get a summed level and compare the summed level to the highest level present in the plurality of data channels and rejecting a common mode interference in each of the plurality of channels if the summed level exceeds the highest level. The distinct features have been added to the independent claims 1 and 17, therefore, rendering them allowable.

## Conclusion

- 4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Johnson (US 5,920,223) discloses a method and apparatus to improve immunity to common-mode noise. Cleveland et al. (US 7,023,900) discloses a system and method for modifying peak-to-average power ratio in CDMA transmitters. Weisman et al. (US 2004/0047461 A1) discloses a method and apparatus for improved conference call management. Nissila et al. (US 6,575,915 B2) discloses a method and apparatus for identifying heartbeat.
- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Siu M. Lee whose telephone number is (571) 270-1083. The examiner can normally be reached on Mon-Fri, 7:30-4:00 with every other Friday off.

Application/Control Number: 10/627,961 Page 4

Art Unit: 2611

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chieh Fan can be reached on (571) 272-3042. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
